

Safety Bulletin - March 2019

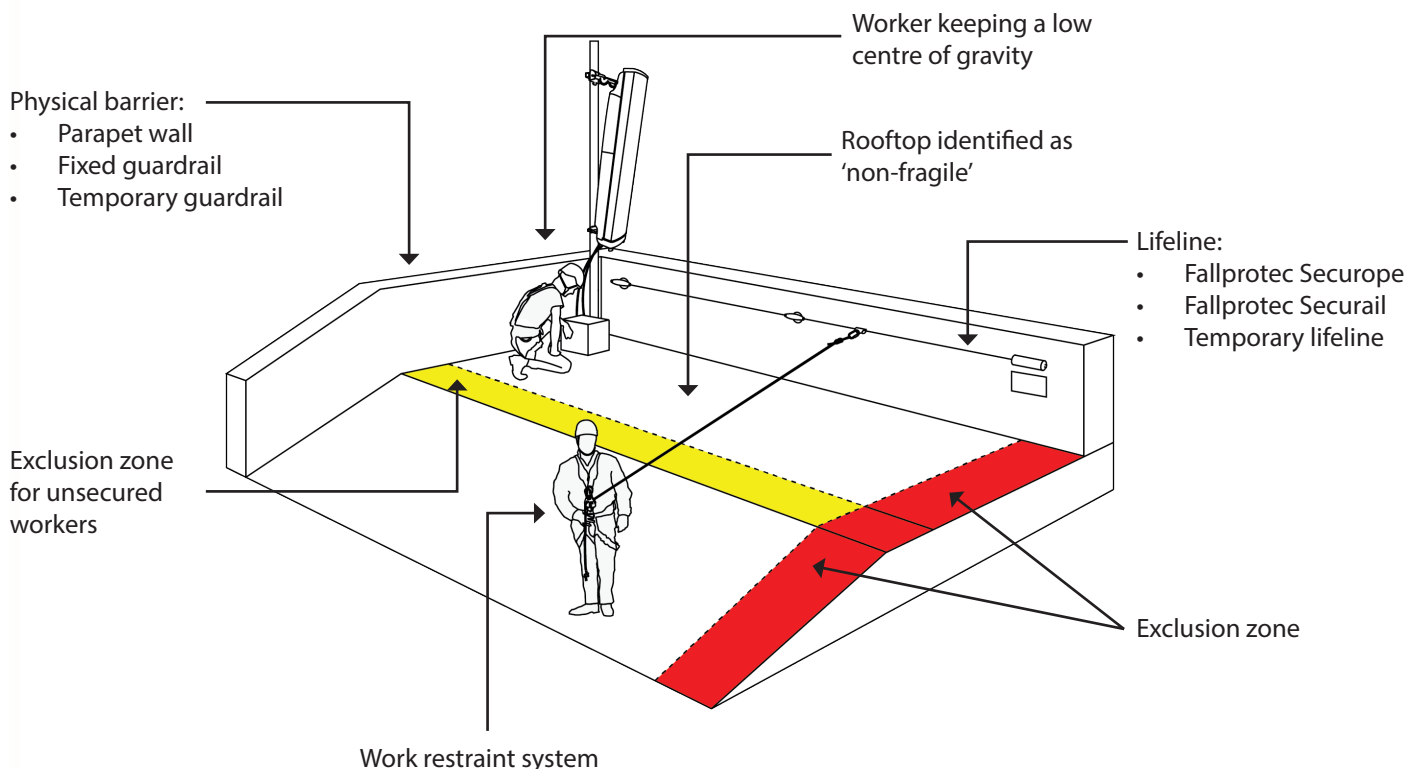

Rooftop Work - Work Restraint

In the work at height industry, rooftop work is among the most dangerous activities performed. When working on rooftops, follow the relevant safety steps in order to protect your workers from serious injury or death.

Before commencing rooftop work, ensure that:

- A work permit for the area is obtained, if required.
- A pre-task risk assessment is completed as per the site and task requirements.
- Competent workers perform tasks under direct supervision of a competent and experienced supervisor.
- The type of rooftop you will be working on is identified.
- The correct type of fall protection system for the rooftop is implemented.
- All safety signage at the rooftop access point is adhered to.

Below is an example of a few of the possible solutions for rooftop work:

Fallprotec offers a wide variety of solutions specifically designed for rooftop work, should you require more information, contact info@gravitygh.co.za
