

LIFTING SAFETY TO NEW HEIGHTS - Safety Forum

Recently Gravity, together with their trusted partners, hosted the highly anticipated event called “Lifting Safety to New Heights” (LSNH). The aim of such an event, is to uplift general health and safety within the telecoms industry with a specific focus for the African continent. This year’s event was held in Johannesburg, South Africa, with previous events being a significant success in Tanzania, Kenya, and Ghana.

LSNH has gained momentum over the last four years and now has a substantial support base of noticeable organisations such as Helios Towers, Vodafone, Nokia, Vodacom, Telkom, and other key role players. It is encouraging to see that each person attending has a desire to ensure their employees return home safely at the end of the day.

Over two days, key speakers shared solutions on how to “Lift Safety to New Heights”, including integrating it into the business environment, despite many safety challenges. These challenges can be overcome by having in place, not just the right controls and the right environment, but also the right culture where every employee on every level is taken into account. Innovation is key to the success of any operation, and the practical demonstrations on some of the solutions discussed, included Mechanical Rigging & Lifting, Driver Monitoring, Drone Inspections, Virtual Reality, and the Role of the Team Leader. Networking opportunities were there for all attendees and the transference of skills and knowledge were unmeasurable.

The most important aspect is the change that follows from participating in the event, as an outflow of the of interaction of all the attendees, enforcing an inclusive, supportive, and ongoing collaborative environment. We would like each of our readers to join the LSNH cause by following our LinkedIn page and stay up to date with the current content as well as next events. *Click icon to follow

LSNH cannot be possible without the ongoing support, contribution, and passion from our sponsors to make a difference. We are committed to changing the hearts and minds of the “last mile guys” as they often lay their lives on the line, to ensure a proper telecommunications infrastructure that everyone needs.
