

## USING TECHNOLOGY TO MANAGE QUALITY

Quality management is a critical factor when discussing any work-at-height topic. A failure in quality, for example with the installation of a fall protection system, could easily lead to the loss of life. Below are some critical ways in which Gravity has used technology to manage quality.

### AUTOMATION AND ACCESSIBILITY

The process of ensuring quality can sometimes become tedious, and often requires significant time and effort. For this reason, Gravity has introduced digital solutions that cover the traceability, inspection and certification of our fall protection systems. With a QR code at each system, any person on site can instantly access all the relevant documentation for any Gravity fall protection system, ensuring ultimate peace of mind.

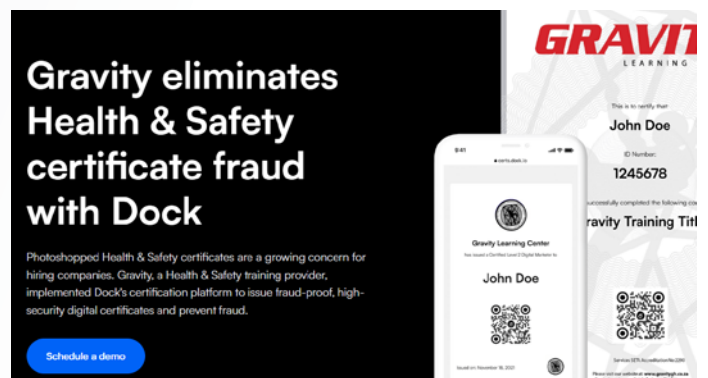

### AUTOMATION AND ACCESSIBILITY

Another quality challenge is ensuring the security and integrity of important data pieces. This is a critical factor when it comes to the status of a fall protection system and the authenticity of competence certificates. With each fall protection system that Gravity sells, we include the Gravity Quality System seal of approval. During installation, the installer captures certain key data pieces that relate to the installation. As the data is captured, an independent reviewer evaluates each piece of data and approves it or refers it for correction. This quality management tool ensures that any installation is carefully checked in detail before it is commissioned. A unique certificate for each installation is issued.

### ONLINE VERIFICATION AND FRAUD PREVENTION

Ensuring fraud-proof digital certificates for trained and competent persons has many organisations flustered. The Gravity verification system ensures that forged certificates are something of the past. With instant verification available on our website, anyone can check the status and validity of an individual's training. This initiative not only ensures the quality and integrity of the data through blockchain technology but it is a practical means to prevent fraud. It also saves customers time and money.
